

## We help you to implement the requirements of the EU GDPR

The **EU GDPR** - European General Data Protection Regulation - has been legally valid since May 25, 2018 and the two-year period of grace granted by the regulatory authorities has long since expired. For this reason, the implementation of the GDPR requirements should be addressed quickly and goal-oriented.

Our nexPerten support you in various project phases during the **implementation** of **SAP ILM** and the **anonymization** of your data. Thus, the individual system requirements and objectives for the implementation of the project are determined through a **preliminary analysis**. After a **joint workshop**, the technical solution is finally implemented, adapted to your requirements and wishes.

### Pre-Analysis

- ▼ Search for personal data in SAP tables (and customer-specific tables)
- ▼ Prioritization of critical application areas
- ▼ System requirements of SAP ILM and an ILM-enabled archiving system
- ▼ Possible interfaces to be considered (e.g., Webshop)

### Joint Workshop

- ▼ Presentation of analysis results
- ▼ Technical solution concept of SAP ILM with live demonstration
- ▼ Handling of personal data in test environments

### HIGHLIGHTS

- ▼ Experienced ILM Experts.
- ▼ Best practice approaches
- ▼ Demo opportunities in workshops
- ▼ Short project duration
- ▼ Individual solutions on request
- ▼ Complementary to ILM: Anonymization of critical data in test systems

### Implementation

- ▼ Joint creation of an ILM rule set
- ▼ Checkup of relevant SAP ILM notes
- ▼ Addition of customer-specific enhancements, if required (e.g., additional ILM applications)
- ▼ Suggestions for optimizations of the data pool for successful blocking and destruction
- ▼ Support for authorizations
- ▼ Performance optimizations (e.g., blocking and destruction reports)
- ▼ Testing of ILM-compliant WebDAV interface by means of suitable test reports
