## EFFICIENT MONITORING AND DOCUMENTATION OF SAP<sup>®</sup> DATA ARCHIVING

SAP<sup>®</sup> data archiving represents a critical intervention in the data storage of business data. With the migration to S/4 HANA or the implementation of the GDPR and the introduction of SAP<sup>®</sup> ILM, the number of archiving runs in most companies is rising significantly. For this reason, auditors are increasingly paying attention to the traceability of the archiving processes. Unfortunately, the SAP<sup>®</sup> system does not offer the necessary instruments to collect all actions and settings quickly and easily to store them permanently and to report them clearly.

With the product Savento Tower<sup>®</sup>, which also contains the Archive Manager, the nexQuent group provides a lean and inexpensive solution for an easy implementation as well as automated documentation of archiving processes.

### ADVANTAGES OF THE SAVENTO TOWER

- ABAP solution fully integrated in SAP<sup>®</sup>
- Automated and audit-compliant creation of reports for data archiving runs
- Clear tree structure of all archiving objects and sessions
- Potential misconducts and their causes can be traced even after a longer period of time
- Flexible report customizing
- Low investment costs and low implementation effort, as well as significant savings on manual routine activities

- Add-on module for simplified and automated creation of variants & jobs for data archiving
- Dependency checks (e.g., predecessors, residence time, etc.) and determination of a sequence for archiving objects
- Automated sending of mails when jobs are started/completed as well as in case of an error
- Comprehensive customizing for adapting to customer-specific requirements possible

#### ADVANTAGES OF THE ARCHIVE MANAGER

#### FUNCTIONALITY

# The following functionalities of the Savento Tower are to be emphasized:

- Archiving jobs can be started at the touch of a button via the Archive Manager
- Automated creation and permanent storing of documentation reports for data archiving runs
- Archiving sessions can also be displayed across various systems in the Tower cockpit (e.g., ERP, CRM, SCM)
- Persistent storing of system and customizing settings, runtimes, spools and job logs at the time of archiving sessions
- Reporting of defined SAP<sup>®</sup> ILM residence and retention periods

- Creation of configurable report layouts and possible output in PDF format
- Central evaluation across several SAP<sup>®</sup> systems possible
- An optional add-on module enables the documentation of general SAP<sup>®</sup> background jobs based on defined selections (business-critical jobs)
